Notes and Potential Issues

The following notes and warnings highlight missing or conflicting information which caused the validator to perform some guesswork prior to validation, or other things affecting the output below. If the guess or fallback is incorrect, it could make validation results entirely incoherent. It is highly recommended to check these potential issues, and, if necessary, fix them and re-validate the document.

Using experimental feature: HTML5 Conformance Checker.

The validator checked your document with an experimental feature: HTML5 Conformance Checker. This feature has been made available for your convenience, but be aware that it may be unreliable, or not perfectly up to date with the latest development of some cutting-edge technologies. If you find any issues with this feature, please report them. Thank you.

No Character encoding declared at document level

No character encoding information was found within the document, either in an HTML meta element or an XML declaration. It is often recommended to declare the character encoding in the document itself, especially if there is a chance that the document will

be read from or saved to disk, CD, etc.

See this tutorial on character encoding for techniques and explanations.

Using Direct Input mode: UTF-8 character encoding assumed

Unlike the “by URI” and “by File Upload” modes, the “Direct Input” mode of the validator provides validated content in the form of characters pasted or typed in the validator's form field. This will automatically make the data UTF-8, and therefore the validator does not need to determine the character encoding of your document, and will ignore any charset information specified.

If you notice a discrepancy in detected character encoding between the “Direct Input” mode and other validator modes, this is likely to be the reason. It is neither a bug in the validator, nor in your document.

Validation Output: 8 Errors6/26/2014 [Invalid] Markup Validation of upload://Form Submission - W3C Markup Validator

<http://validator.w3.org/check> 3/4

Line 5, Column 4: Saw <?. Probable cause: Attempt to use an XML processing instruction in HTML. (XML processing instructions are not supported in HTML.)

```
<? php include'php/header.php'; ?>
```

Line 21, Column 2: Saw <?. Probable cause: Attempt to use an XML processing instruction in HTML. (XML processing instructions are not supported in HTML.)

```
<? php include 'php/header-navs.php'; ?>
```

Line 31, Column 2: Saw <?. Probable cause: Attempt to use an XML processing instruction in HTML. (XML processing instructions are not supported in HTML.)

```
<? php include 'about-us-carousel.php'; ?>
```

Line 191, Column 93: Bad value 90% for attribute width on element img:

Expected a digit but saw % instead.

```
... src="img/content/our-team.png" width="90%" align="left" hspace="20" > </div>
```

Syntax of non-negative integer:

One or more digits (0–9). For example: 42 and 0 are valid, but -273 is not.

Line 191, Column 93: The align attribute on the img element is obsolete.

Use CSS instead.

```
... src="img/content/our-team.png" width="90%" align="left" hspace="20" > </div>
```

Line 191, Column 93: The hspace attribute on the img element is obsolete.

Use CSS instead.

```
... src="img/content/our-team.png" width="90%" align="left" hspace="20" > </div>
```

Line 267, Column 2: Saw <?. Probable cause: Attempt to use an XML processing instruction in HTML. (XML processing instructions are not supported in HTML.)

```
<? php include 'php/footer.php'; ?>
```
